

Amazon Prime Performance Report

PROJECT SUMMARY

PROJECT OBJECTIVE

To analyze the Amazon Prime content catalog to understand content distribution, rating, structures, geographic reach and content growth.

The steps involved in the project are :

DATA COLLECTION

DATA SOURCE

The data was downloaded from kaggle (<https://www.kaggle.com/datasets/shivamb/amazon-prime-movies-and-tv-shows>) as a zip file, which was then extracted after the download.

DATA PREPARATION

TOOLS USED

- MS Excel
- Tableau

DATA CLEANING

Handled raw dataset formatting, misaligned data, missing values, corrected the data types of respective columns, updated missing values.

EXPLORATORY DATA ANALYSIS

Used various charts to display insights from the data and the key performance indicators.

KEY INSIGHTS

Content distribution

Amazon Prime exhibits heavy emphasis on movies over TV shows in their platform , where the movie is the majority by 87% while TV shows account for the remaining 13%.

TARGET AUDIENCE

The most rating for TV shows and movies on the platform are for 13+ followed by 16+ and ALL .

GLOBAL REACH

The platform hosts a wide variety of content from different directors, genres, and from different countries for the viewers.
